

BABY TOOLS SHOP SUBMISSION CHECKLIST

Project: 'Baby Tools Shop'

Repository: 'https://github.com/FatihYalcin42/baby-tools-shop'

Pull Request: 'https://github.com/FatihYalcin42/baby-tools-shop/pull/1'

Live App: 'http://91.98.162.80:8025/'

Branch for submission: 'feature/project-submission'

1. Repository

Existing files

- [x] '.gitignore' exists and ignores irrelevant project files.
- [x] 'Dockerfile' exists and describes the application container image.
- [x] 'README.md' exists and has been restructured to match the required submission format.
- [x] Top-level repository files and directories are explicitly documented in the README.

Dockerfile

- [x] A suitable base image is defined: 'python:3.9-slim'.
- [x] A container port is exposed: '8025'.
- [x] All required setup steps are defined so the application can start without manual setup.
- [x] Python dependencies are installed during image build.
- [x] Startup logic is moved into an external entrypoint script: 'docker-entrypoint.sh'.
- [x] The container applies migrations on startup.
- [x] The container runs 'collectstatic' on startup.
- [x] The application is started with a WSGI server ('gunicorn'), not with Django 'runserver'.

README.md

- [x] The README contains a Table of Contents.
- [x] The README contains a short repository description near the top.
- [x] The README contains a dedicated 'Prerequisites' section.
- [x] The README contains a 'Quickstart / Installation Instructions' section near the top.
- [x] The README contains a more detailed 'Usage' section.
- [x] The README contains a complete 'Configuration' section with documented environment variables.
- [x] The README explains that Docker startup runs migrations, collects static files and starts 'gunicorn'.
- [x] The README documents the top-level repository structure only, as requested in the review.

2. Documentation

- [x] Project documentation is provided in 'README.md'.
- [x] The documentation language is English.
- [x] The README was updated to follow the structure requested in the Developer Academy FAQ

and in the review feedback.

3. Notes

Submission items

- [x] Repository link is available.
- [x] Pull request link is available.
- [x] The pull request targets a branch in the student's own repository, not the Developer Akademie repository.
- [x] Live app link on the VM is available.
- [x] A filled checklist document has been created for the resubmission.
- [] Loom video is not included in this resubmission package.

Security notes

- [x] No SSH keys are stored inside the repository workspace.
- [x] No passwords, tokens or usernames are hardcoded in the repository code.
- [x] Environment variables are used for runtime configuration.
- [x] No sensitive IP or secret values are stored in the codebase.

Code conventions

- [x] Environment variable names use 'UPPER_CASE_WITH_UNDERSCORE'.
- [x] Variable references use '\${...}' notation where applicable, for example '\${PORT}' in the entrypoint script.
- [x] Default values are configured only where they make sense, for example 'PORT=8025'.
- [x] Critical configuration values are expected to be passed through environment variables.

4. Testing

- [x] The project was started locally before and during containerization work.
- [x] Docker image build was tested successfully.
- [x] Container startup on port '8025' was tested successfully.
- [x] The application responds on 'http://127.0.0.1:8025/'.
- [x] The application responds on 'http://91.98.162.80:8025/'.
- [x] Django admin static files are served correctly in Docker via WhiteNoise.
- [x] Admin login page styling was verified after static file handling was fixed.
- [x] Sample categories and products were added manually in the admin interface.

Manual content added for verification

- [x] 'Elma'
- [x] 'Muz'
- [x] 'Brokoli'
- [x] 'Patl?can'

5. Review-specific fixes

- [x] Submission workflow changed from direct work on 'main' to a dedicated feature branch.
- [x] Pull request created from 'feature/project-submission' into 'main' in the student's own fork.
- [x] README restructured to include description, prerequisites and quickstart in the expected order.
- [x] Docker startup changed from Django development server to WSGI server startup.
- [x] Startup command moved out of the Docker 'CMD' shell command into an external script.
- [x] Static file delivery in Docker was fixed so the Django admin is rendered correctly.

Final note

This checklist reflects the current resubmission state of the repository and the manual verification steps completed during the final review pass.
